Response to Amendment

1. The amendment filed on January 8, 2004 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Frank Becking on March 31, 2004 and April 16, 2004.

The application has been amended as follows:

Claims 28-29 have been cancelled and further, per applicant's request, the claims have been cancelled specifically without prejudice to later pursuits in a continuing application. The claims have been cancelled because they are omnibus type claims.

Claim 30 now reads:

A system programmed to operate according to a method selected from a group of methods consisting of the optical scanning method of claims 1-27.

Claim 32 now reads:

A computer-readable medium embodying a program to direct a machine to perform a method selected from a group of methods consisting of the optical scanning method of claims 1-27.

Claim 33 now reads:

Art Unit: 2878

A computer-readable medium containing a program to generate data representing sample results, wherein said data is made by a method selected from a group of methods consisting of the optical scanning method of claims 1-27.

Claims 30-33 were amended because they contained dependency upon cancelled claims. Further, claim 33 was amended to alleviate an improper dependent claim.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:
4. Claims 1-27 and 30-33 are allowed.

Regarding claims 1-27 and 30-33, none of the prior art of record specifically discloses scanning a sample array saturating some samples and obtaining a set of non-saturated results, and further scanning the same sample array a second time, with a lower sensitivity and obtaining a second set of non-saturated results. None of the prior art of record discloses the specific steps of scanning the sample as disclosed above but prior art references such as Noblett (US Patent 6,471,916) disclose a method of scanning in a sample array by scanning a set of calibration spots to determine whether to increase/decrease the sensitivity of the light source before scanning the sample.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
